

WITH THE NEW ELINCHROM APP, TAKE FULL CONTROL OF YOUR NEXT PHOTO SESSION AND STREAMLINE YOUR WORKFLOW EFFICIENTLY.

December 15, 2020, Renens, Switzerland

Early this year, Elinchrom announced a new version of their Studio Software for macOS and Windows. Now is the time for the unveiling of the mobile version, the Elinchrom App. A brand new iOS application built to control your lighting setups more efficiently, saving you time and effort on set. Now available on iPhone and iPad.

Control your Elinchrom flash units quickly and efficiently.

Elinchrom users can now use their mobile devices to control their lighting setups and experience all the time and labor savings a modernized, user-friendly interface brings to their workflow. Now you can access and adjust your lights' advanced settings faster than ever, even when they are out of reach. Plus, the App's dashboard gives you a clear overview of your entire lighting set up, which can be saved and reloaded, ensuring repeatability and cutting down future set up times.

A wide range of Elinchrom units is supported, from older range D-Lite RX's to the latest ELC 125/500.

All enabled Elinchrom units require the Elinchrom Bridge, a module available as a separate item.

ELINCHROM APP

PRODUCT INFO

Combined with the Elinchrom Bridge, the Elinchrom App enables you to:

- Control enabled Elinchrom units from your iOS device to make your workflow fast and efficient.
- Manage advanced settings from the App while the Elinchrom Transmitter handles exposure and synchronization.
- Keep an overview of your lighting setup from the dashboard.
- Quickly access each unit's settings even when they are out of reach.
- Save custom setups, saving you set up time for your next shoot.
